MEMORANDUM FOR: Suggestion Committee

SUBJECT: Suggestion No. 62-223, Cutting Costs¹
 and Improving Communications Within
 the Agency - [REDACTED]

25X1A9a

1. The Ground Systems Division, Office of ELINT, has reviewed the subject suggestion relative to applicability to its requirements. Currently this Office is in the process of obtaining three video tape producing/monitoring systems in support of NE/DDP field projects and finds the subject suggestion directly applicable in part if not in its entirety.

2. The systems being obtained are one inch video tape recorder/reproducers with camera. Purpose of the systems is to provide both field and Headquarters the benefit of currently available video training tapes, production of technical data on systems in development and in the field and supply of recreational tapes for field use.

3. The establishment of a video center as proposed in the subject suggestion would greatly enhance and increase in scope the available material for input to the above systems. This would be provided by the capability to convert from available and internally produced one inch video tapes to two inch tapes and increase the input to our systems by conversion of available two inch recordings.

4. The intent of this memorandum is to substantiate the applicability of the referenced suggestion and recommend favorable consideration of a video center with intra Agency benefits.
